Killer JavaScript One-Liners

NEXT →

Hey Everyone 🙌

Javascript is everywhere. Millions of webpages are built on JS.

Here are some killer Javascript One liners, That'll Make You Look Like a Pro!

Do Like, save and Share This Post If You Found This Helpful.

Clear All Cookies

You can clear all the cookies stored by the application by setting their expiry date to a date that has already passed.

```
const clearCookies = document.cookie
  .split(';')
  .forEach(
    (cookie) =>
      (document.cookie = cookie.replace(/^\+/ , ''))
        .replace(/=.*/, `;expires=${new Date(0)}
          .toUTCString()};path=/`))
  );
```

Reverse a String

You can reverse a string in one line using `split`, `join`, and `reverse` methods.

```
const strReverse = str => str.split('').reverse().join('');  
  
strReverse('CodeClash');  
//hsalCedoc
```

Scroll to the Top

You can scroll to the top of the page in Javascript using `scrollTop()` method. It accept the X and Y coordinates of the position javascript should scroll top.

```
const toTop = () => window.scrollTo(0, 0);
```

Generate a Random Hex

This method generates a random hex code using `Math.random()` and `padEnd()`.

```
const hexClr = () =>
  '#' +
  Math.floor(Math.random() * 0xffffffff)
    .toString(16)
    .padEnd(6, '0');

console.log(hexClr())
```

Capitalise a String

Javascript doesn't have an **inbuilt capitalise function**, so we can use the following code of the purpose.

```
let str = 'follow codeclash for learning web development';
let capStr = str.replace(/\w\S*/g, (w) => (w.replace(/^\w/, 
(c) => c.toUpperCase())))
);
console.log(capStr);
```

Copy to Clipboard

Easily copy any text to clipboard using `navigator.clipboard.writeText`.

```
const copy = (text) => navigator.clipboard.writeText(text);  
  
copy('Code.Clash');
```
