CHARTIST - SIMPLE RESPONSIVE CHARTS

You may think that this is just yet another charting library. But Chartist.js is the product of a community that was disappointed about the abilities provided by other charting libraries. Of course there are hundreds of other great charting libraries but after using them there were always tweaks you would have wished for that were not included.

This is the documentation of Chartist v0.11
We now recommend using **Chartist v1** instead!
