

JS

Refresh page

in **JavaScript**

like and share

Page Refresh

```
window.location.reload();
```

Represents URL

Main function

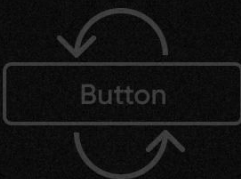

Another option is using

document.location.reload();

Swipe for some interactions

Swipe →

Page refresh on button click

```
<button type="button"  
onClick="window.location.reload();">  
  Refresh for update values  
</button>
```

Another option is using
onClick="document.location.reload();"

Automatically refresh page

Uses: `setTimeout()` method

```
setTimeout(() => {  
  documentation.location.reload();  
}, 60000);
```

delay in ms

Here the page will reload every minute.

Swipe →

Page refresh using **history** function

History function **history.go()**; navigates through the browsing history forward or backward based on **positive / negative value** passed.

```
history.go( );
```

But for **refreshing** the page we can pass **0** or simply leave the paranthesis **empty**.

Can be used instead of **reload()**; function.

Do you find it helpful?

let me know down in the
comments !
