History Of JavaScript

In 1993, **Mosaic**, the first popular web browser, came into existence.

In the **year 1994**, **Netscape** was founded by **Marc Andreessen**. He realized that the web needed to become more dynamic.

Thus, a '**glue language**' was believed to be provided to HTML to make web designing easy for designers and part-time programmers. @CODEBUSTLER

Consequently, in 1995, the company recruited Brendan Eich intending to implement and embed Scheme programming language to the browser.

But, before Brendan could start, the company merged with Sun Microsystems for adding Java into its Navigator so that it could compete with the a Microsoft over the web technologies and platforms.

Now, two languages were there: Java and the scripting language. Further, Netscape decided to give a similar name to the scripting language as Java's. It led to 'Javascript'.

@CODEBUSTLER

- ✓ Finally, **in May 1995**, Marc Andreessen coined the first code of Javascript named '**Mocha**'.
- ✓ Later, the marketing team replaced the name with '**LiveScript**'.
- ✓ But, due to trademark reasons and certain other reasons, **in December 1995**, the language was finally renamed to '**JavaScript**'.

From then, JavaScript came into existence.

Application of JavaScript

JavaScript is used to create **interactive websites**.
It is mainly used for:

- ✓ Client-side validation,
- ✓ Dynamic drop-down menus,
- ✓ Displaying date and time,
- ✓ Displaying pop-up windows and dialog boxes (like an alert dialog box, confirm dialog box and prompt dialog box),
- ✓ Displaying clocks etc.

@CODEBUSTLER

Features of JavaScript

- ✓ All popular web browsers support JavaScript as they provide **built-in execution environments**.
- ✓ JavaScript follows the **syntax and structure** of the C programming language. Thus, it is a structured programming language.
- ✓ JavaScript is an **object-oriented** programming language that uses prototypes rather than using classes for inheritance.
- ✓ It is a **light-weighted** and **interpreted** language & It is a **case-sensitive** language.
- ✓ JS is supportable in **several operating systems** including, Windows, macOS, etc.
- ✓ It provides **good control** to users Web Browser.
