

JAVASCRIPT EVENT PROPAGATION

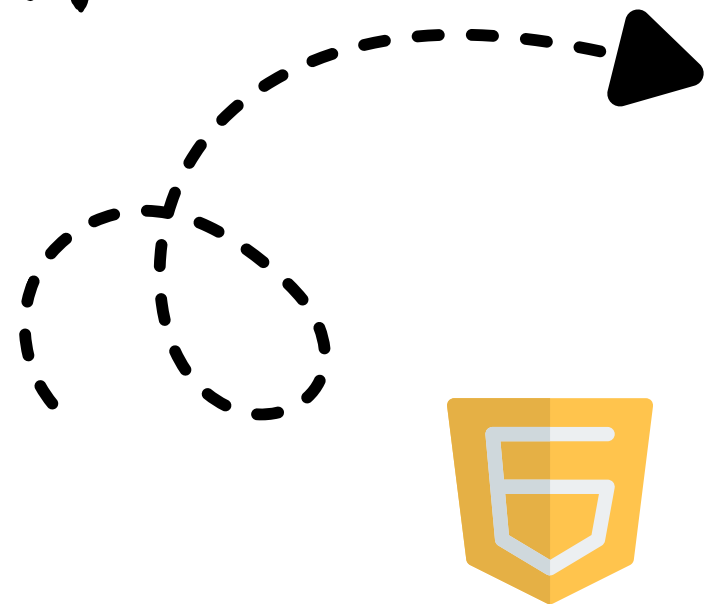

EXPLAINED
VISUALLY

WHAT IS EVENT PROPAGATION?

JavaScript handles events in a structured way
called event propagation

WHEN DO WE NEED TO UNDERSTAND
EVENT PROPAGATION?

CLICK EVENT TO
VIEW PROFILE

Imagine you have multiple clickable elements nested inside each other — like a profile card, with a button inside it.

You want the button click to perform one action (like send message), and the card click to do something else (like open a profile details).

But what happens if clicking the button triggers both the button's and the card's actions?

This is where event propagation comes in!

CLICK EVENT TO
SEND MESSAGE

CLICK EVENT TO
VIEW PROFILE

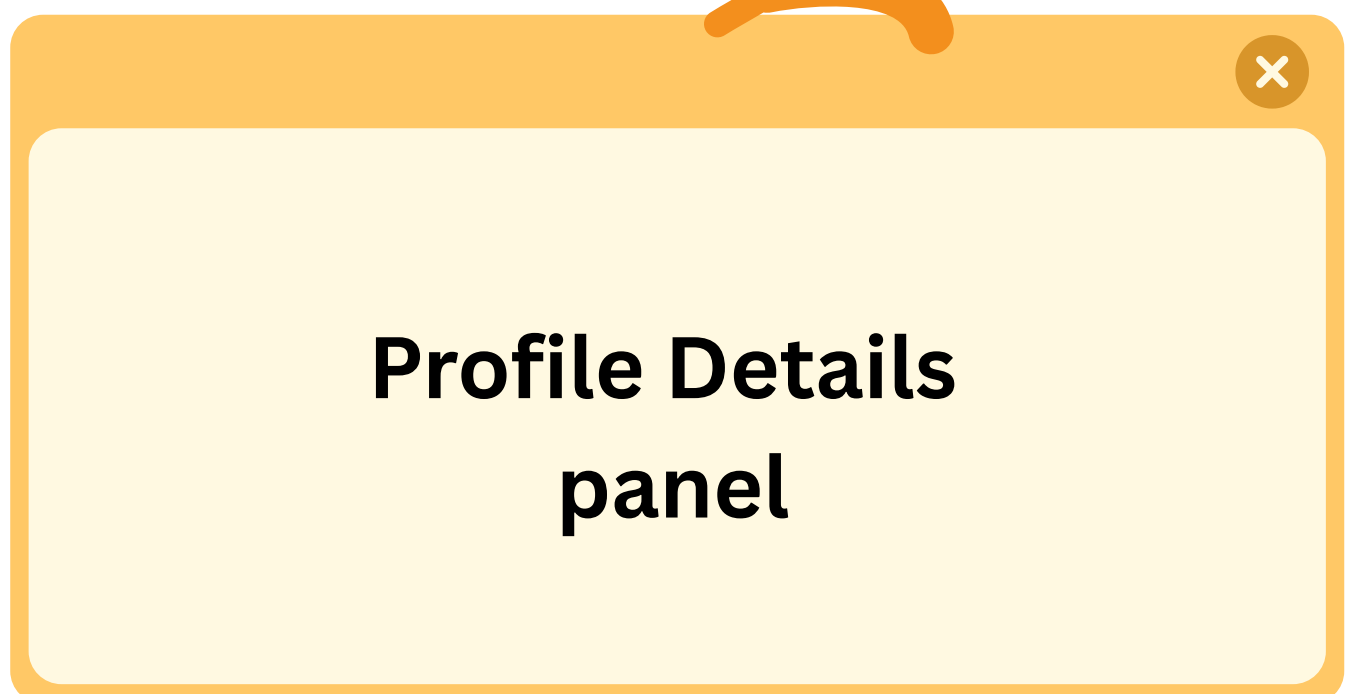

When the user clicks the Send Message button, it should ideally open the message panel — but it doesn't work that way by default.

Well, it didn't work. You're right if you think that by clicking the button, we are indirectly clicking the card. Both the event handlers are executed when we click the send message button.

SO, HOW DO WE
IMPLEMENT THIS

Output

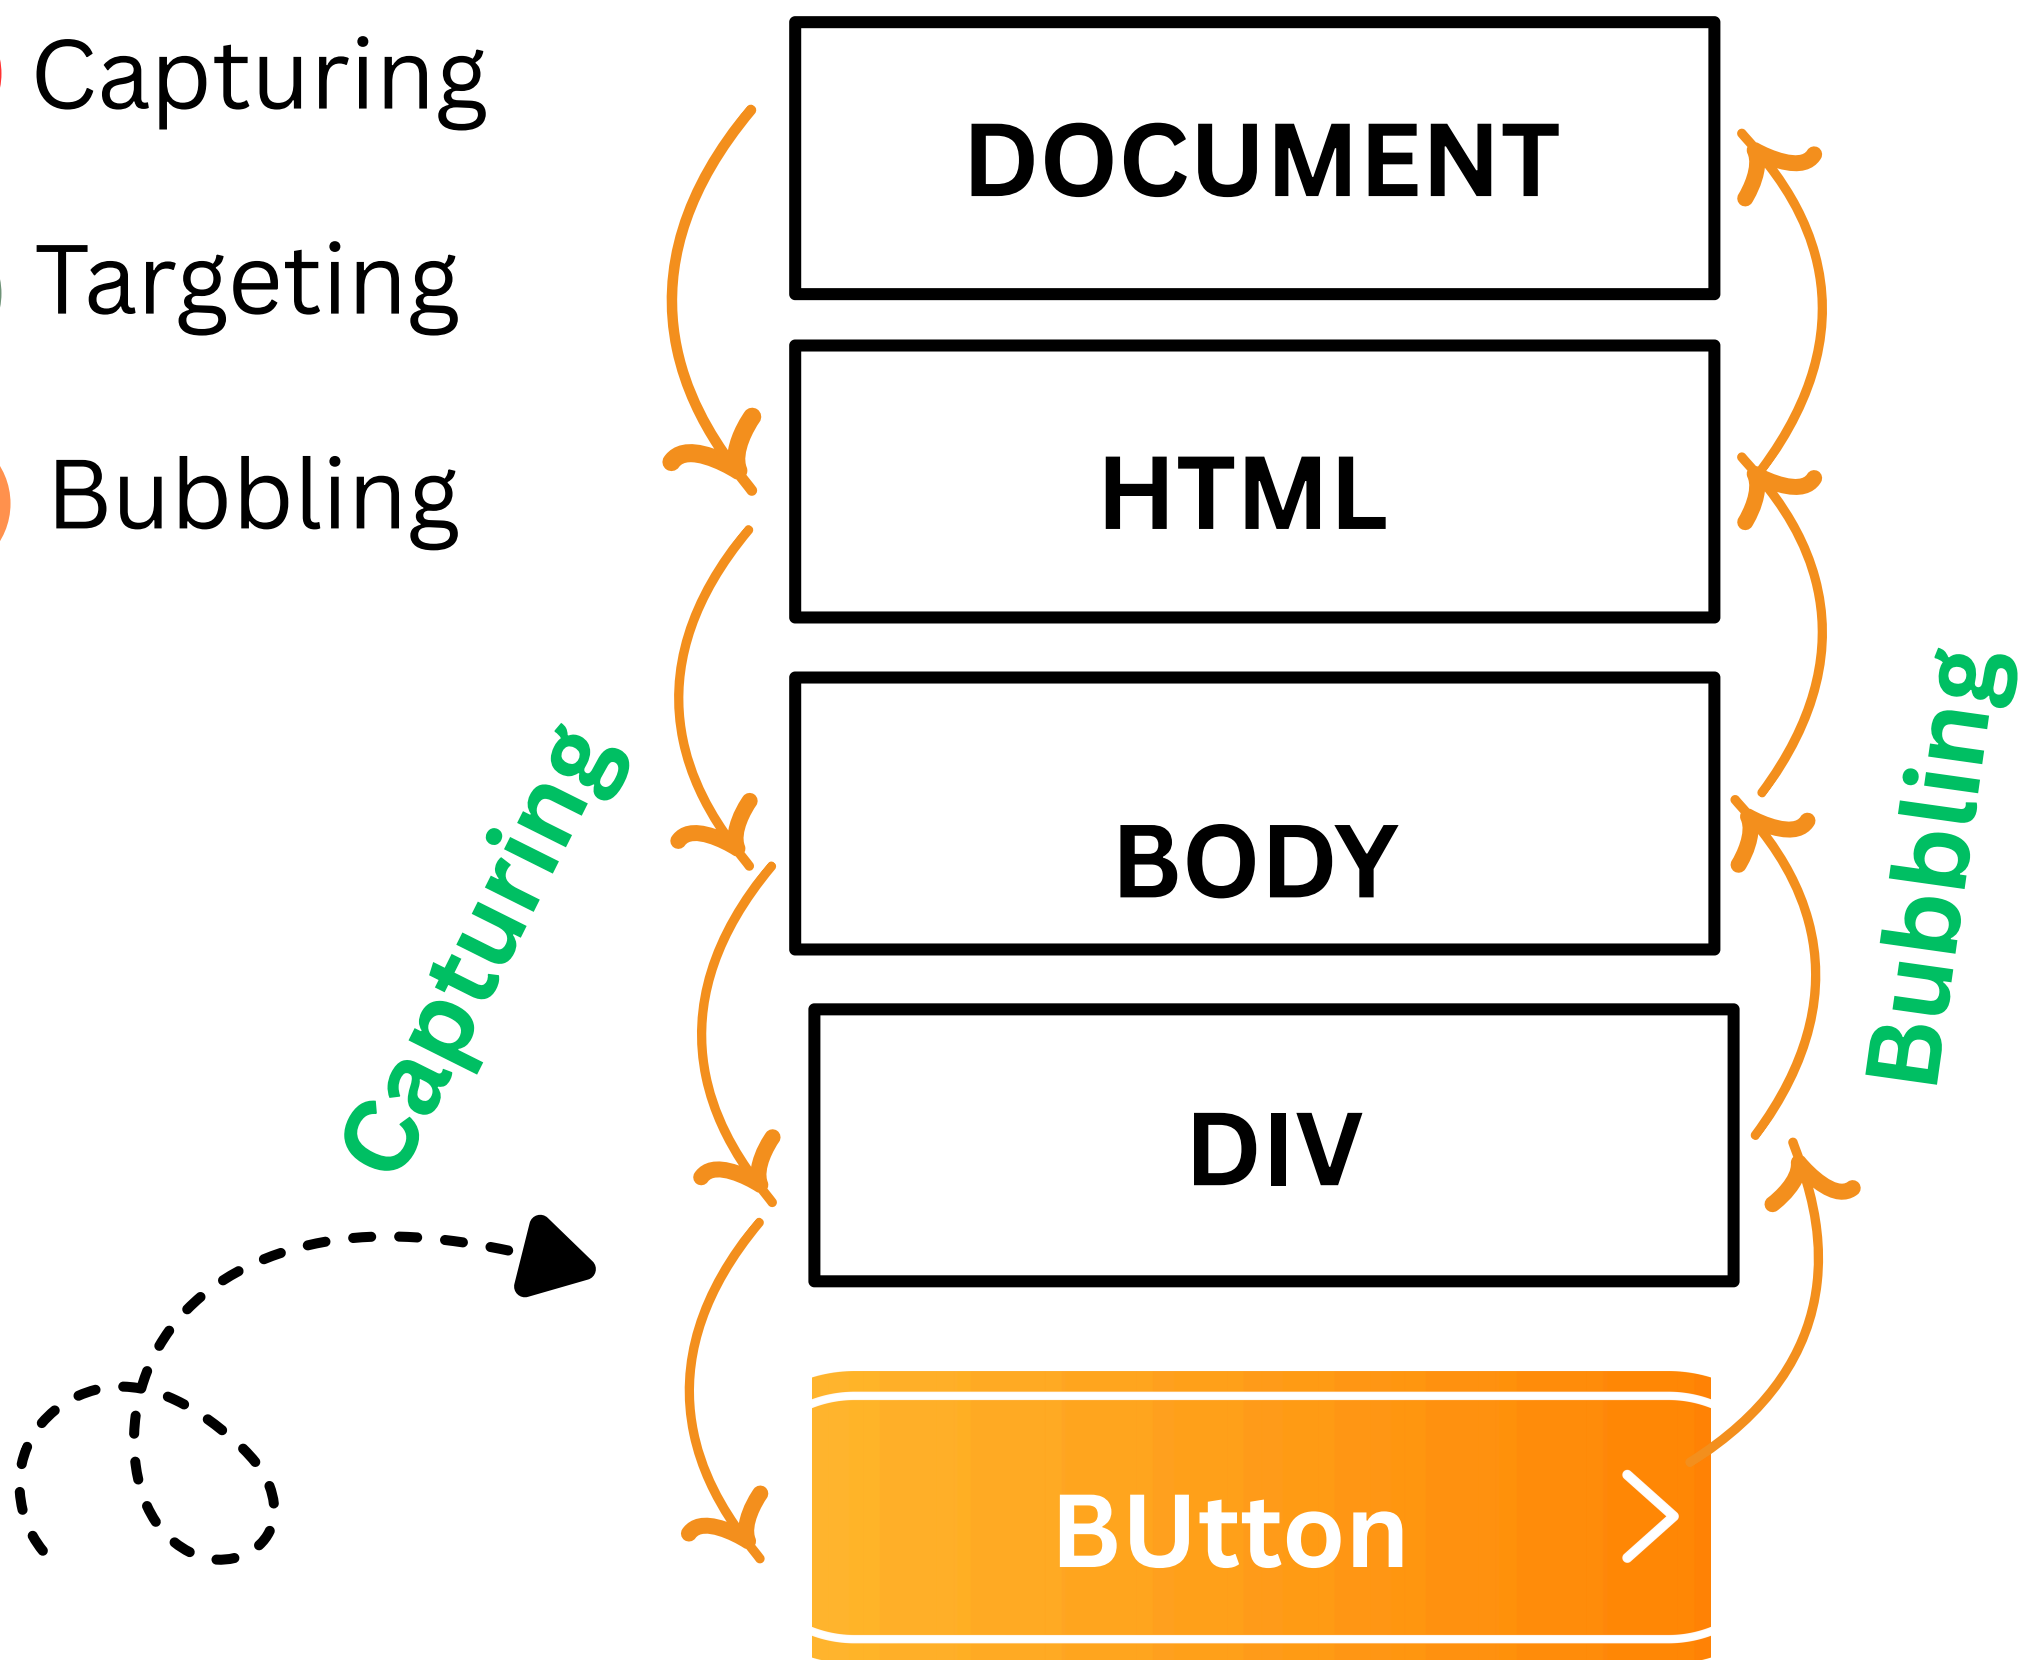

EVENT PROPAGATION?

HOW EVENTS TRAVEL IN THE DOM

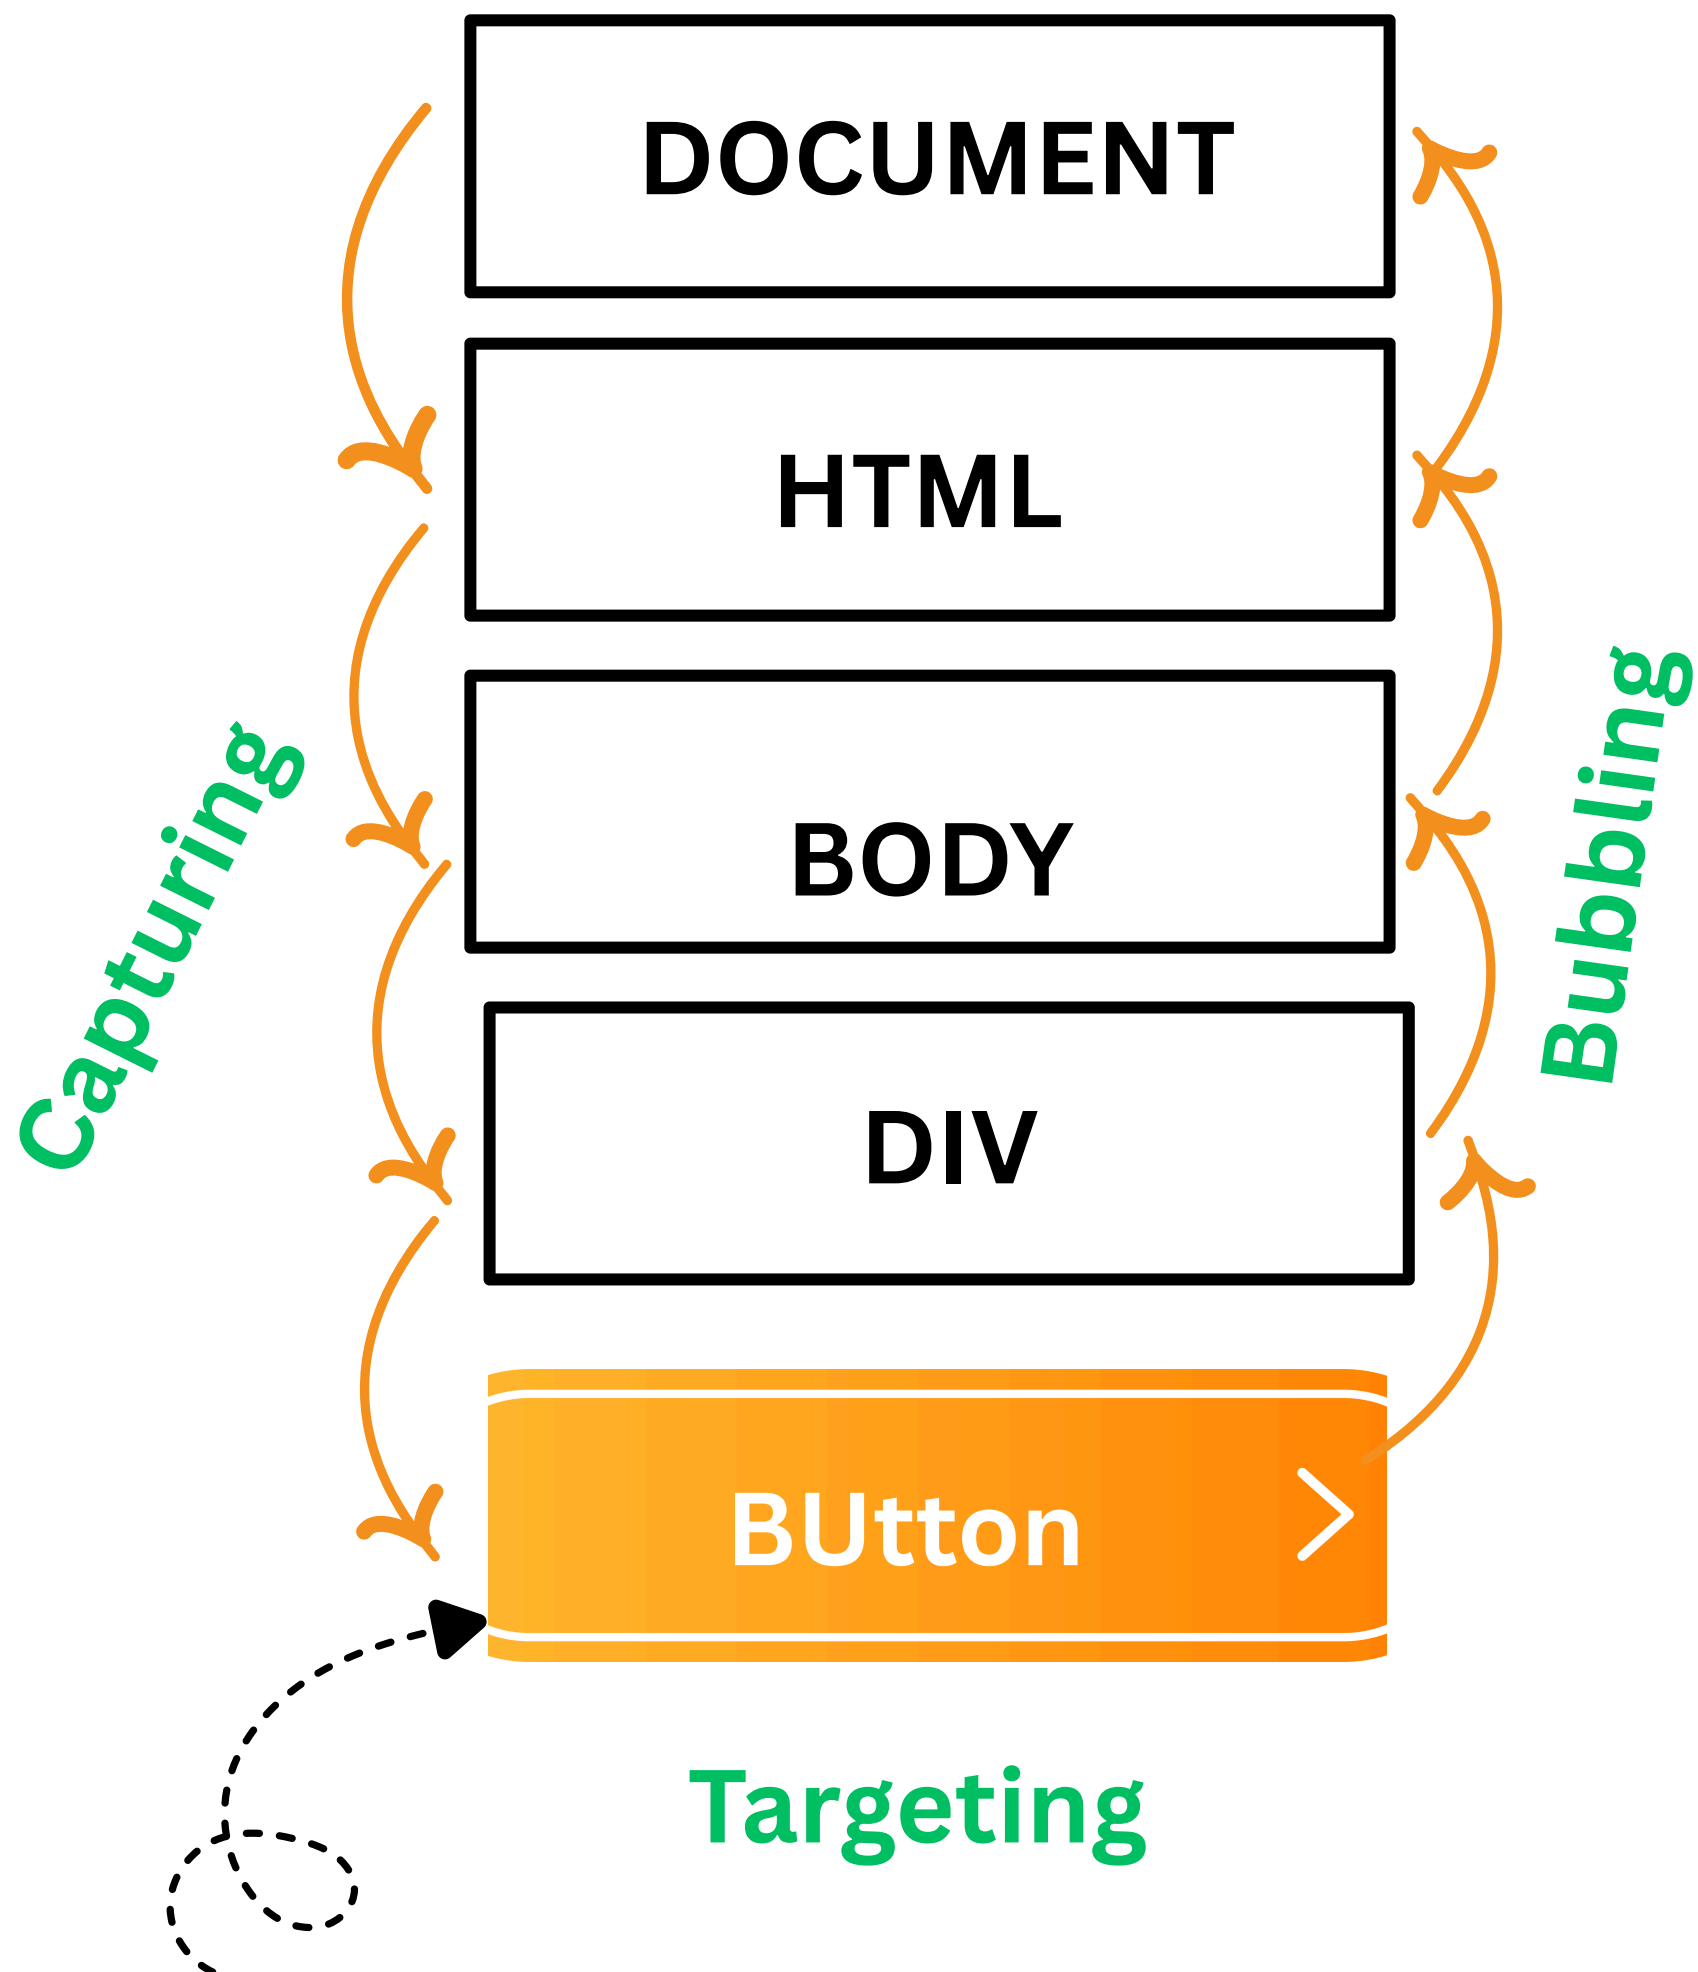

JavaScript handles events in three phases:

- Capturing
- Targeting
- Bubbling

see what's happening
here in the next slide

Targeting

When the button is clicked, the event goes through **capturing** — from `.user` → `.user__description` → `.user__cta` (the button).

At the target, the button opens the message panel. Then during bubbling, the event reaches `.user`, triggering its handler, which replaces the message panel with user details.

MANIPULATING EVENT PROPAGATION?

JavaScript allows you to control how events move through the DOM using these key methods:

event.stopPropagation()

Stops the event from bubbling (or capturing) any further.

use when You want only the current element's handler to run, not its ancesto

```
element.addEventListener("click", (e) => {  
    e.stopPropagation();  
});
```

event.stopImmediatePropagation()

Stops all other handlers on the same element and prevents bubbling.

**THANK YOU FOR
SCROLLING THIS
FAR!**

YOU'VE OFFICIALLY BUBBLED YOUR
WAY THROUGH THE ENTIRE POST!
