

THE COMMON USE CASE EVERYONE KNOWS

```
1  // The common use case everyone knows
2  const userData = {
3      profile: {
4          // name property might not exist
5      }
6  };
7
8  // Instead of: userData.profile && userData.profile.name
9  const userName = userData.profile?.name; // No error if profile is null/undefined
10
```
